PROFESSIONAL SUMMARY

Java Backend Software Engineer at **Frost & Sullivan** designing and shipping reliable **Spring Boot** REST APIs and backend services. Hands-on experience building multi-tenant SaaS systems, stateless **JWT & HTTP-Only cookie** authentication, relational and NoSQL data layers (**PostgreSQL, MySQL, MongoDB**), **Redis** caching and rate limiting, asynchronous **Apache Kafka** pipelines, and containerized **Docker** deployments.

TECHNICAL SKILLS

Backend & Security:	Java (17+), Spring Boot 3, Spring Security, RESTful APIs, Spring Data JPA / Hibernate, Spring WebClient, JWT, RBAC, Bucket4j
Databases & Messaging:	PostgreSQL, MySQL, MongoDB, Redis (Read Caching, Pub/Sub, Sorted Sets), Apache Kafka, Flyway Migrations
Cloud, DevOps & Tools:	Docker, Docker Compose, AWS, Nginx, Git, GitHub Actions, Maven, Prometheus, Grafana k6, JUnit, Postman

PROFESSIONAL EXPERIENCE

Software Engineer A1 (Java Backend) | Frost & Sullivan — Dec 2025 – Present • Kathmandu, Nepal

- Design, develop, and maintain production **Java** and **Spring Boot** RESTful APIs, delivering clean, validated service contracts and modular business logic across backend modules.
- Enforce endpoint security using **Spring Security**, token-based authentication, role-based access control, and centralized exception handling to ensure reliable API behavior.
- Optimize schema queries and persistence workflows across relational and document databases (**PostgreSQL, MySQL, MongoDB**) alongside **Redis** caching to cut redundant database lookups.
- Collaborate in Agile engineering sprints through **Git** pull-request code reviews, automated API testing, and containerized **Docker** environments for consistent delivery.

SELECTED ENGINEERING PROJECTS

Multi-Tenant Inventory Management SaaS ↗

Stack: Java 17, Spring Boot 3.5, MySQL, Flyway, Redis, Bucket4j, Docker, Nginx, Prometheus, Grafana k6

- Architected a multi-tenant SaaS backend isolating organizations, stock transactions, reconciliation audits, and subscription tiers via a custom `TenantInterceptor` and thread-local tenant context.
- Accelerated read-heavy inventory queries and protected APIs against abuse using **Redis** caching, Pub/Sub invalidation, sorted-set leaderboards, and **Bucket4j** token-bucket rate limiting validated with **Grafana k6** load scripts.
- Automated zero-drift schema migrations with **Flyway** and orchestrated a 3-replica horizontal Spring Boot cluster behind **Nginx** with **Docker Compose** and **Prometheus** metrics.

Multi-Vendor Cloud E-Commerce Platform ↗

Stack: Java 17, Spring Boot 3.4, MongoDB, Spring Security, JWT, Redis, Cloudinary, Spring Mail

- Engineered a multi-vendor marketplace REST API segregating `ADMIN`, `VENDOR`, and `USER` permissions through stateless **JWT** authentication filters and method-level `@PreAuthorize` security.
- Built paginated product search and category filtering backed by **Redis** caching, multipart cloud image uploads via **Cloudinary**, and admin vendor-approval workflows.
- Automated daily `@Scheduled` stock-threshold scans that detect low-inventory SKUs and dispatch HTML restock alerts to vendors via **Spring Mail**.

Event-Driven External API Gateway ↗

Stack: Java 17, Spring Boot 3.5, Reactive WebClient, Apache Kafka, Redis, Docker

- Built a fault-tolerant integration gateway consuming third-party Weather and Currency Exchange APIs via non-blocking **Spring WebClient** with **Redis** TTL read-through caching.
- Decoupled API response times from audit persistence by publishing request telemetry to **Apache Kafka** topics and processing events asynchronously in consumer groups with manual offset commits.

EDUCATION

B.Sc. in Computer Science and Information Technology (B.Sc. CSIT) | Mahendra Multiple Campus (TU) — 2021 – 2025 • Nepalgunj, Nepal

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming (Java), Software Engineering, Distributed Systems.
